

# You trust us to take all your commercial water treatment needs off your plate. Give us that same trust for your GSA drinking water testing needs.

## Ensure Your Drinking Water Quality Meets GSA Standards with SWS.

**What is PBS 1000.7A?** PBS 1000.7A establishes requirements for managing and overseeing drinking water quality in federally owned facilities and leased spaces under GSA's jurisdiction. This policy ensures that drinking water systems are safe and meet federal, state, and local standards.

### What Are the Required Tests?

- ◆ **Baseline Water Testing:** Required for all occupied federally owned facilities over 1,000 sq. ft.
- ◆ **Cold Water Outlets:** Test at least 10% of outlets for lead, copper, and total coliform bacteria (including E. coli).
- ◆ **Hot and Cold Water Outlets:** Test for legionella presence.

### What Happens if Tests Show Issues?

- ◆ **Remediation Actions:** If test results exceed safety thresholds, remedial actions must be taken to lower contamination levels.
- ◆ **Post-Remediation Testing:** Conducted by a qualified professional to ensure the water is safe before resuming use.

### Why Choose SWS?

- ◆ **Expert Testing and Remediation:** SWS is a qualified professional capable of conducting all necessary tests and implementing remediation actions.
- ◆ **Compliance with GSA Standards:** We ensure your facility meets PBS 1000.7A requirements and maintains the highest drinking water quality.

## Making your job easier, your partner in all your water needs.
